Background

As part of Design validation and acceptance criteria, Structure Borne Noise (SBN) levels are measured. Measurements were performed as per the standards and the results are given in this report.

Objective

The aim of the project is to study the Structure Borne Noise levels above the Mounting arrangement points. The tests were conducted on the test rig. The actual boundary conditions of the valves are simulated.

Reference standards and documents

- MIL STD 740-2 for Structural Bone Noise (Vibration)

Description of the valve :

Client : VINPRA ENGINEERING INDIA PVT LTD
 Drawing No. : VP/1PC/TEBV/FLG/002
 Test Item : 40 NB Ball valve
 Model No. & S.No. : B12150
 Material : LG4C
 Heat No. : 17723

Test requirements:

Structure Borne Noise (SBN) – Vibrations

Vibration Levels were measured above all the mounts in three perpendicular directs X, Y and Z in 1/3rd octave frequency band in the range 10 Hz to 10 kHz. All the measurements are performed in the above-mentioned operating conditions. SBN levels are measured in acceleration in dB with a reference of 1e-05 m/s².

n

$$\text{Acceleration in dB } L = 10 \log \left(\sum_{i=1}^n 10^{0.1L_i} \right) - 10 \log n$$

Where, L = Vibration level in AdB at any particular 1/3 octave band frequency.

Li = Vibration level in AdB measured at ith point.

n = Number of measuring points.

A_{ref} - 1e-05 m/s²

Test Description

Measurements of Structure Borne Noise Levels were performed at 3 locations. Tri-axial Accelerometers were used to measure the vibrations in all three directions as Horizontal – X direction (suction and discharge side), Axial – Y direction and Vertical - Z direction.

Acceptable values as per specifications:

Vibration: The vibration level 'L' as calculated above is to be compared with the vibration level of the equipment in the 1/3 octave frequency band of 10 Hz to 10 KHz in dB with respect to reference threshold $1 \times 10^{-5} \text{ m/sec}^2$ measured above the securing bolts of the equipment should not exceed the value limited by the straight line joining 80dB at 25 Hz and 105 dB at 8 KHz respectively.

Parameters:

SBN levels were measured using Accelerometers fixed to the valve above of all 3 mounting locations. The signal was analyzed for the SBN levels in 1/3rd Octave bands.

Frequency Bands	: 10 - 10 kHz
Sampling Frequency	: 32 kHz
Averaging time	: 20 seconds
Average type	: Linear

Conclusions:

The performance of the 40 NB BALL valve is found to be satisfactory and the SBN levels are within the allowable limits.

Instrument Details:

Data Acquisition System

Make : Bruel & Kjaer
Model : Photon+
DAQ : ICP
No. of Channels : 4 Channel
Serial No. : 5027845
Date of Calibration : 28-10-2022
Next Calibration : 27-10-2023

Tri-axial Accelerometers

Make : Dytran
Model : 3313A1
Serial No. : 1249
Nominal Sensitivity : 10 mV/g
Date of Calibration : 11-10-2022
Next Calibration : 11-10-2023
